---

1. Executive Summary

This BRD defines the business and functional requirements for a **Recruitment & AI Interview Platform** that enables recruiters and companies to post jobs, onboard candidates (students), screen resumes with AI, and conduct proctored AI-driven technical (DSA) interviews with anti-cheating measures and automated scoring.

The platform supports two primary user types: **Recruiters** (companies, admins, read-only users) and **Students** (candidates who apply to jobs and take AI interviews). Key differentiators include AI resume matching, structured DSA interviews with authenticity checks, and comprehensive proctoring (full-screen, tab/screen switch alerts, copy logging, and risk scoring).

Enterprise-ready scope (v2.0): This BRD now includes competitor analysis, business model & pricing, market analysis, success metrics, risk mitigation, API & integration architecture, security & compliance framework, AI

governance, scalability targets, analytics dashboards, advanced anti-cheating, and strategic positioning—making it suitable for investor and enterprise review.

---

2. Project Overview

2.1 Purpose

- Centralize recruitment for companies with role-based access (super admin, admin, read-only).
- Provide a job board where students can discover and apply to jobs via forms.
- Automate resume screening using AI and trigger AI interview invitations when there is a fit.
- Conduct fair, proctored technical (DSA) interviews with anti-cheating controls and detailed, factor-based scoring (out of 100).

2.2 Scope

In Scope	Out of Scope
Recruiter signup (super admin), invites, permissions	Native mobile apps (can be later)
Company onboarding (unique companies)	Payroll / HRIS integration
Job posting and job board	Legal/compliance deep-dives (refer to legal)
Student application forms and account creation on first apply	Offline interview mode
Bulk student onboarding via sheet upload	

2.3 Unique Selling Propositions (USPs)

USP	Description
AI-first screening	Resume is scanned by AI against job criteria; only shortlisted candidates get AI interview slots—reduces recruiter load and speeds up funnel.
Authenticity verification	After first code submission, AI asks follow-up questions on the solution to verify the candidate wrote it and understands it—reduces copy-paste and proxy cheating.
End-to-end proctoring	Full-screen enforcement, screen/tab switch alerts, inspect disabled, and copy-event logging; violations feed into a risk factor for fair, transparent assessment.
Structured DSA + report	Two DSA questions with test-case evaluation and factor-wise score (out of 100), giving recruiters a comparable, actionable report per candidate.
Zero-friction for students	No signup to apply; student account is created on first application; one account for multiple companies and jobs.
Flexible onboarding	Recruiters can either use the job board (students apply via form) or bulk-import candidates via sheet—same pipeline to AI interview and report.

---

3. Goals & Objectives

Goal	Objective
Recruiter efficiency	Reduce time-to-hire via AI screening and structured interviews.

Quality of hire	Ensure candidate authenticity via code-questioning and proctoring.
Scalability	Support multiple companies, roles, and candidates on one platform.
Fairness & transparency	Clear rules (full-screen, no inspect, copy logging) and factor-based scores.
Candidate experience	Simple apply flow and clear interview expectations.

---

4. User Personas

4.1 Recruiter Users

- **Super Admin:** First signup; can invite members, assign admin/read-only, manage company.
- **Admin:** Can post jobs, manage candidates, view reports, invite users (if permitted).
- **Read-only User:** Can view jobs, candidates, and reports; no edit/post permissions.

4.2 Student Users

- **Student/Candidate:** Discovers jobs, fills application forms, gets account on first apply, takes AI interview when invited, receives feedback/report.

4.3 System

- **AI:** Resume scanning, interview conduction, code questioning, scoring, report generation.

---

5. Functional Requirements

5.1 Authentication & User Management

ID	Requirement	Priority
FR-AUTH-01	Expose **signup** for users in **Super Admin** mode (first user of a company).	Must
FR-AUTH-02	Super Admin can **invite** other members via email/link.	Must
FR-AUTH-03	Support **roles**: Super Admin, Admin, Read-only User; assign per invite.	Must
FR-AUTH-04	Invited users get signup/login flow and inherit assigned role.	Must
FR-AUTH-05	**Company onboarding:** Support unique companies; each company has its own workspace/members.	Must
FR-AUTH-06	Student account is **created on first job application** (no pre-signup required to browse/apply).	Must
FR-AUTH-07	Students can have **one account** and apply to **multiple jobs** across different companies.	Must

---

5.2 Company & Recruiter Features

ID	Requirement	Priority
FR-COMP-01	Recruiter (admin/super admin) can **onboard their company** (name, details, branding if needed).	Must
FR-COMP-02	Recruiter can **post jobs** on the platform job board (title, description, requirements, resume criteria).	Must
FR-COMP-03	Recruiter can **bulk onboard students** by uploading a **sheet** (CSV/Excel); system creates/links student accounts.	Must
FR-COMP-04	Recruiter can view list of applicants per job and their status (applied, screened, invited, interviewed, reported).	Must
FR-COMP-05	Recruiter can view **AI-generated student reports** and scores (out of 100, factor breakdown).	Must

---

5.3 Job Board & Student Application

ID	Requirement	Priority
FR-JOB-01	**Job board** is visible to students (public or after minimal gate; no account required to view jobs).	Must
FR-JOB-02	Student **fills application form** per job (e.g. name, email, resume upload, optional fields).	Must
FR-JOB-03	On first form submit, system **creates a unique student account** (email as identifier; password/setup flow as needed).	Must
FR-JOB-04	Same student can **apply to multiple jobs** (different companies) using the same account.	Must
FR-JOB-05	Application form may include resume upload and basic eligibility fields as defined by job.	Should

---

5.4 AI Resume Screening & Interview Invitation

ID	Requirement	Priority
FR-AI-01	On application submit, system **scans the uploaded resume with AI** against job criteria set by recruiter.	Must
FR-AI-02	If resume **meets** the job criteria, system **sends an AI interview invitation** with **time slot selection**.	Must
FR-AI-03	Student can **choose a time slot** from available options; confirmation stored.	Must
FR-AI-04	If resume does not meet criteria, store result and optionally notify student (e.g. “under review” or “not shortlisted”).	Should

---

5.5 AI Interview – Structure & Content

ID	Requirement	Priority
FR-INT-01	Interview includes **two DSA (Data Structures & Algorithms) questions**.	Must
FR-INT-02	**Second question** is presented **after** the user submits the first question's solution.	Must
FR-INT-03	After user submits the **first code**, system **asks follow-up questions** about that solution (e.g. complexity, approach, edge cases) to verify **authenticity** and reduce cheating.	Must
FR-INT-04	AI evaluates: (1) code submission, (2) test case results, (3) discussion answers.	Must
FR-INT-05	System generates a **detailed report** for the student including factor-wise breakdown.	Must
FR-INT-06	System **rates the student out of 100** on **several factors** (e.g. code correctness, complexity, explanation quality, test cases passed).	Must

---

5.6 AI Interview – Proctoring & Anti-Cheating

ID	Requirement	Priority
FR-PROCT-01	Interview runs in **full-screen mode** (enforced where technically possible).	Must
FR-PROCT-02	**Screen switch** (e.g. Alt+Tab, other monitor) triggers an **alert** and is **recorded**.	Must
FR-PROCT-03	**Tab switch** (browser tab change) triggers an **alert** and is **recorded**.	Must
FR-PROCT-04	**Disable or detect use of browser Inspect/DevTools** during the interview.	Must
FR-PROCT-05	**Log copy events**: record **what the user copies** (e.g. snippet of code/text) and timestamp.	Must
FR-PROCT-06	All violations (screen switch, tab switch, inspect, suspicious copy) **contribute to a risk/cheating factor** in the final report.	Must
FR-PROCT-07	Final report includes **proctoring summary** and **risk score** (or risk level).	Must

---

5.7 Reports & Scoring

ID	Requirement	Priority
FR-REP-01	Report includes: overall score (0–100), factor-wise scores, code evaluation, discussion summary, test cases passed/failed.	Must

FR-REP-02	Report includes proctoring events and risk factor.	Must
FR-REP-03	Recruiter (admin/read-only) can view and export (e.g. PDF) student reports per job.	Should

---

6. Non-Functional Requirements

ID	Requirement	Category
NFR-01	Resume scan and interview start should complete within defined SLA (e.g. < 2 min for scan).	Performance
NFR-02	Interview session must be recoverable (e.g. resume from disconnect) within a short window.	Reliability
NFR-03	All invite links, tokens, and session data must be handled securely (HTTPS, secure storage).	Security
NFR-04	PII (resumes, names, emails) must be stored and processed per data retention and privacy policy.	Compliance
NFR-05	UI must be usable on common desktop browsers (Chrome, Edge, Firefox) for interview.	Usability
NFR-06	Proctoring and copy-logging must be disclosed to the candidate (consent/terms).	Legal/UX

---

7. User Flows

7.1 Recruiter: Signup → Company → Job → Candidates

1. User signs up as **Super Admin**.
2. Onboards **company** (name, details).
3. **Invites** members with role (Admin / Read-only).
4. **Posts job(s)** on the job board.
5. (Optional) **Bulk uploads** student sheet to onboard candidates.
6. Views **applicants** and **AI reports** for each student.

7.2 Student: Apply → Account → Interview → Report

1. Student sees **job board**, selects a job.
2. Fills **application form** (resume + fields).
3. On first submit → **student account created**.
4. **AI scans resume**; if match → **interview invitation** with **time slot**.
5. Student **selects slot** and receives confirmation.
6. At slot time, student joins **AI interview**: full-screen, proctoring on.
7. **Question 1** → submit code → **follow-up questions** on that code.
8. **Question 2** (DSA) → submit code → (optional) follow-up.
9. System generates **report** (score out of 100, factors, risk); student and recruiter can view.

7.3 Bulk Onboarding (Recruiter)

1. Recruiter uploads **sheet** (CSV/Excel) with student details (e.g. name, email, college).
2. System **creates/links student accounts** and optionally associates with a job or "pool".
3. Recruiter can then trigger **AI interview invitations** or next steps for these students.

---

8. System Components

Component	Responsibility
Auth & RBAC	Signup, login, invites, roles (Super Admin, Admin, Read-only), company association.
Company & Job Management	Company onboarding, job CRUD, job board listing.
Application & Student	Application form, resume upload, student account creation, multi-apply.
Bulk Import	Parse sheet, validate, create/update student records.
AI Resume Service	Scan resume vs job criteria; return match/no-match; trigger invite flow.
Scheduling	Time slots, booking, reminders for AI interview.
Interview Engine	DSA questions, code run/test, follow-up Q&A, full-screen & proctoring hooks.
Proctoring Service	Full-screen, visibility/tab/screen switch, inspect detection, copy logging, violation storage.
Scoring & Report	Factor-wise score (0–100), risk factor, report generation, recruiter view/export.

---

9. Possible Features to Be Added

9.1 Recruiter & Company

- **Multi-company per group:** One group/enterprise with multiple companies (e.g. group admin).
- **Custom application form fields** per job (dropdowns, checkboxes, file types).
- **Job templates** and duplicate job for similar roles.
- **Approval workflow** for job post (e.g. read-only approver).
- **Branding:** Custom logo, colors, and email templates per company.
- **SSO / LDAP** for enterprise recruiters.
- **Audit log** for invite, role change, job post, and report view.

9.2 Job Board & Applications

- **Saved jobs** and **application status** page for students.
- **Email/SMS reminders** for interview slot and pre-interview instructions.
- **Calendar sync** (Google/Outlook) for interview slot.
- **Withdraw application** and **reapply after cooldown** (if allowed).
- **Application deadline** and **max applications per job** (caps).

9.3 AI & Screening

- **Recruiter-defined criteria** (keywords, experience range, skills) for resume matching.
- **Explainable match:** Short reason "why matched" for recruiter and optionally for student.
- **Re-screening** when job criteria are updated.

- **Multiple AI interview types:** DSA only, DSA + system design, DSA + behavioral.
- **Custom question bank** per company or per job.
- **Practice mode** for students (non-evaluated DSA run).

9.4 Interview & Proctoring

- **Live proctoring** (human watcher) in addition to automated.
- **Video/audio recording** (with consent) for review.
- **Plagiarism check** on submitted code (e.g. against known solutions).
- **Randomized question order** and **question pools** to reduce leakage.
- **Timer per question** and **total interview timer** with warnings.
- **Mobile-friendly interview** (e.g. responsive; proctoring limitations documented).
- **Retake policy:** One free retake per job with different questions.

9.5 Reports & Analytics

- **Dashboard** for recruiter: total applicants, pass rate, average score, risk distribution.
- **Compare candidates** (side-by-side scores and factors).
- **Export to ATS** (CSV, or ATS API integration).
- **Student-facing report** with tips to improve (e.g. "practice complexity").
- **Factor customization:** Recruiter can weight factors (e.g. code 50%, communication 30%, proctoring 20%).

9.6 Platform & Ops

- **Super-admin dashboard** (platform-level): companies, jobs, users, usage.
- **Email/SMS notifications** (configurable templates).
- **Multi-language** for UI and emails (e.g. EN, Hindi).
- **Accessibility** (WCAG) for application and interview UI.
- **API for ATS/HRIS** (post result, sync jobs).

---

10. Future Scope: Hiring Pipeline Extension

The hiring pipeline can be **extended and configured per recruiter** (or per job). Recruiters define the sequence of stages; candidates progress through each stage based on pass/fail outcomes.

10.1 Example Pipeline Stages

Stage	Description
1. Resume Screening	AI scans resume against job criteria; shortlisted candidates move to next stage.
2. MCQ Round	Multiple-choice questions (aptitude, domain, or technical); auto-graded; pass threshold set by recruiter.
3. AI Interview	Proctored DSA interview (as defined in current scope); report and score out of 100.
4. Manual Interview(s)	Human interviewer conducts live interview; recruiter sends invite, records session, submits review, and marks pass/fail.

Recruiters can add, remove, or reorder stages (e.g. add another MCQ round, skip AI interview for certain roles).

10.2 Manual Interview Features

Feature	Description
Google Meet invite	Recruiter sends interview invite with Google Meet link; candidate receives link (email/in-app) with date/time.
Recording	Manual interview is recorded (video/audio); recording is initiated from within the platform or via Meet recording.
Save recording	Recording is **saved and stored** in the platform; linked to the candidate and job for later review.
Review submission	Manual interviewer can **submit a written review** (feedback, notes, strengths, concerns) after the interview.
Pass/Fail decision	Interviewer marks the candidate as **Pass** or **Fail** for that round; result updates the pipeline and candidate status.

10.3 Pipeline Flow (Future)

```
Application → Resume Screening → MCQ Round → AI Interview → Manual Interview(s) → Offer/Reject
                    ↓                    ↓              ↓                    ↓
               (Pass/Fail)          (Pass/Fail)   (Score/Report)      (Pass/Fail + Review)
```

---

11. Assumptions & Constraints

Assumptions

- Recruiters and students have stable internet and a desktop browser for the interview.
- Resume format (PDF/DOC) is acceptable for AI parsing.
- One “company” maps to one tenant/organization for the scope.
- Time slots are in a single timezone or timezone-aware (to be defined).
- Legal consent for proctoring and copy logging is obtained (terms/checkbox) before interview.

Constraints

- Proctoring accuracy is limited by browser APIs (e.g. full-screen, visibility, copy).
- AI scoring may need calibration over time; human override or review may be needed.
- Bulk sheet format (columns) will be defined and validated (e.g. required: email, name).

---

12. Competitor Analysis

12.1 Primary Competitors (Technical Interview Platforms)

Competitor	Strengths	Weaknesses	Gap vs Our Product
HackerRank	Large DSA library, plagiarism detection, AI-assisted grading, ATS integrations, enterprise-ready	Expensive for startups, complex UI	❌ No public job board; ❌ No automatic AI resume-to-interview pipeline; ❌ Limited authenticity questioning after submission

Codility	Strong anti-cheating, real-world coding tasks, automated scoring	No integrated hiring funnel, no resume AI matching	❌ No end-to-end hiring pipeline; ❌ No student-first job discovery
CodeSignal	Modern UI, gamified scoring, live interview environment	Expensive, resume screening not core	❌ No job board; ❌ No auto interview trigger
HackerEarth	Hackathons, budget-friendly, good coding library	UI not enterprise-grade, weak resume intelligence	❌ No public job board; ❌ Limited AI resume screening
iMocha	AI interviewer bot, AI proctoring, skill-based assessments	No strong public job marketplace, less DSA depth vs HackerRank	❌ No job board; ⚠️ Authenticity Q&A limited

12.2 Competitive Feature Comparison Table

Feature	Our Platform	HackerRank	Codility	CodeSignal	iMocha
Public Job Board	✅	❌	❌	❌	❌
AI Resume Screening	✅	⚠️ Limited	❌	⚠️	⚠️
Auto Interview Trigger	✅	❌	❌	❌	❌
DSA Interview	✅	✅	✅	✅	⚠️
Authenticity Q&A (post-code)	✅	❌	❌	❌	⚠️
Risk Score from Proctoring	✅	⚠️	✅	⚠️	✅
Full Hiring Pipeline	⚠️ Future	❌	❌	❌	❌
Multi-tenant Companies	✅	✅	✅	✅	✅

Legend: ✅ Full support | ⚠️ Partial/Limited | ❌ Not available

---

13. Business Model & Pricing Strategy

13.1 Pricing Models

Model	Description	Target
Model A – SaaS Subscription	₹X / month per recruiter; interview credits included	SMBs, startups
Model B – Pay Per Interview	₹Y per interview completed; no monthly fee	Occasional hirers
Model C – Enterprise License	Annual contract; custom integrations, SSO, dedicated support	Large enterprises

13.2 Revenue Add-ons

- Advanced analytics & dashboards
- Video proctoring (manual interview recording)
- ATS integrations (Greenhouse, Lever, Workday)
- White-labeled version
- Dedicated AI model customization

13.3 Cost Considerations

- Cost per AI interview (compute, AI API)
- Cost per resume scan
- Storage for recordings, logs, reports

---

14. Market Analysis

14.1 Target Customers

- **Startups & SMBs:** Cost-conscious; need efficient screening without large HR teams
- **Enterprises:** Need compliance, integrations, audit trails
- **Colleges/Placement Cells:** Bulk campus hiring; student-first job discovery

14.2 Market Sizing (To Be Defined)

Metric	Description
TAM	Total addressable market (all companies hiring tech talent)
SAM	Serviceable addressable market (companies using online assessments)
SOM	Serviceable obtainable market (realistic Year 1–3 target)

14.3 Geography Focus

- **Phase 1:** India (colleges, startups, IT hiring)
- **Phase 2:** APAC, then global

---

15. Success Metrics & KPIs

KPI	Target	Notes
Avg time-to-hire reduction	30%	vs manual screening baseline
AI screening accuracy	85%+	Match/no-match vs human review
Interview completion rate	90%	Started vs completed
Cheating detection accuracy	80%+	Risk score correlation with manual review
Candidate satisfaction score	4+ / 5	Post-interview survey
System uptime	99.9%	For interview & job board
Resume scan time	< 60 sec	P95

API response time	< 300 ms	P95

---

16. Risk & Mitigation

Risk	Impact	Mitigation
AI bias in scoring	Unfair outcomes, legal exposure	Bias monitoring, blind scoring option, recruiter override
Legal issues with copy logging	Privacy complaints, GDPR	Explicit consent, data retention policy, anonymization where possible
Browser limitations for proctoring	Cheating undetected	Document limitations; combine with authenticity Q&A
Candidate backlash on surveillance	Low adoption, bad reviews	Transparent disclosure, minimal necessary logging
Question leakage	Cheating, loss of trust	Large question pool, randomization, per-candidate variants
AI model drift	Inaccurate scores over time	Quarterly calibration, manual audit sample
Failed resume parse / AI errors	Poor candidate experience	Fallback to manual review, retry logic, error handling

---

17. API & Integration Architecture

17.1 API-First Design

The platform exposes secure **REST APIs** for integration with:

- ATS systems (Greenhouse, Lever, Workday)
- HRMS platforms
- University/placement systems
- Enterprise dashboards & reporting tools

17.2 Core API Modules

Module	Key Endpoints
Authentication	`POST /auth/signup`, `POST /auth/login`, `POST /auth/invite`, `POST /auth/role-assign`
Jobs	`POST /jobs`, `GET /jobs`, `PATCH /jobs/{id}`, `DELETE /jobs/{id}`
Candidates	`POST /candidates/import`, `GET /candidates`, `GET /candidates/{id}`, `PATCH /candidate-status`
Interview	`POST /interview/invite`, `GET /interview/report/{candidateId}`, `POST /interview/reschedule`
Reports	`GET /reports/job/{jobId}`, `GET /reports/export/pdf`, `GET /reports/export/csv`

17.3 Webhooks (Real-Time Sync)

Event	Webhook Trigger
Candidate applied	`candidate.applied`
Resume shortlisted	`candidate.shortlisted`
Interview completed	`interview.completed`
Candidate passed	`candidate.passed`
Candidate failed	`candidate.failed`

---

18. Enterprise Security & Compliance

18.1 Security Architecture

- HTTPS enforced everywhere
- Encryption at rest (AES-256)
- JWT-based authentication
- Role-Based Access Control (RBAC)
- Rate limiting & IP throttling
- Audit logging for sensitive actions

18.2 Compliance Roadmap

Compliance	Status
GDPR readiness	Phase 1
Data retention policy	Defined
Candidate consent logging	Mandatory
SOC 2	Phase 2
ISO 27001	Planned

18.3 Data Retention Policy

Data Type	Retention	Configurable
Resume data	12 months	Yes
Interview logs	12 months	Yes
Proctoring logs	6–12 months	Yes
Video (if enabled)	Per policy	Yes

---

19. AI Governance & Transparency

19.1 AI Scoring Model (Default Weights)

Factor	Weight	Description

Code Correctness	40%	Test cases passed, logic correctness
Efficiency/Complexity	20%	Time/space complexity, optimal approach
Test Case Coverage	15%	Edge cases handled
Code Quality	10%	Readability, structure
Explanation Quality	10%	Follow-up Q&A on submitted code
Risk/Proctoring	5%	Violations, copy events

Recruiters can configure weights per job.

19.2 AI Validation Strategy

- 5–10% of interviews manually audited
- Bias detection monitoring
- Drift monitoring on model performance
- **Recruiter override capability** for final score
- Model retraining schedule (quarterly)

19.3 Anti-Bias Measures

- Blind resume scoring option (hide name, college)
- Optional removal of college/institution from scoring
- Equal difficulty question pools
- Audit trail for AI decisions

---

20. Scalability & Performance

20.1 Infrastructure Design

- Cloud-native deployment (AWS/GCP/Azure)
- Microservices architecture
- Auto-scaling containers
- CDN for job board
- Separate interview compute engine

20.2 Target Performance Metrics

Metric	Target
Resume scan time	< 60 sec
Interview launch time	< 30 sec
Concurrent interviews	5,000+
System uptime	99.9%
API response time	< 300 ms

20.3 Scalability Definition

- Max concurrent interviews supported: 5,000+

- Target companies (Year 1): TBD
- Target students per month: TBD
- Auto-scaling on demand for interview sessions

---

21. Analytics & Dashboard System

21.1 Recruiter Dashboard

- Total applicants per job
- Screening pass rate
- Interview pass rate
- Average score per job
- Risk score distribution
- Time-to-hire metrics

21.2 Candidate Analytics

- Performance breakdown (factor-wise)
- Historical attempts
- Improvement suggestions (student-facing)

21.3 Platform Admin Dashboard

- Companies onboarded
- Active interviews
- Revenue metrics
- AI accuracy tracking

---

22. Advanced Anti-Cheating Layer

Beyond current proctoring (full-screen, tab/screen switch, copy logging):

Layer	Description
Behavioral monitoring	Typing speed analysis, sudden paste detection, long inactivity flag
Question randomization	Large question pool, random test cases, per-candidate question variants
Plagiarism engine	Compare against internal DB, internet known solutions, previous candidates

---

23. Strategic Positioning

23.1 Positioning Statement

"The first AI-powered end-to-end hiring pipeline combining resume intelligence, authenticity-driven DSA interviews, and risk-scored proctoring."

23.2 Category Definition

We are **not** competing only with HackerRank, Codility, CodeSignal, HackerEarth, or iMocha. We are defining a new category:

AI Hiring Infrastructure — Job board + AI screening + proctored DSA + authenticity checks + configurable pipeline.

23.3 Key Differentiators

- **Integrated workflow:** Job board → AI screening → auto interview invite → proctored DSA → report (competitors assume you import candidates)
- **Authenticity intelligence:** Post-code Q&A to verify candidate wrote and understands the solution
- **Student-first:** No signup to apply; one account for multiple companies
- **Extensible pipeline:** Future stages (MCQ, manual interview with GMeet, recording, pass/fail)

---

24. Glossary

Term	Definition
Super Admin	First user of a company; can invite members and assign Admin / Read-only.
Admin	Recruiter role with permission to post jobs, manage candidates, view reports.
Read-only User	Recruiter role with view-only access to jobs, candidates, reports.
DSA	Data Structures and Algorithms (e.g. arrays, trees, graphs, sorting, DP).
Job board	Public or gated list of jobs where students can apply.
Risk factor	Score or level derived from proctoring events (tab/screen switch, copy, inspect) indicating cheating likelihood.
Factor (scoring)	Dimension on which the student is rated (e.g. code correctness, complexity, communication, test cases).
Bulk onboard	Importing multiple students via CSV/Excel to create or link accounts.
ATS	Applicant Tracking System (e.g. Greenhouse, Lever, Workday).
TAM/SAM/SOM	Total / Serviceable Addressable / Serviceable Obtainable Market.
